Shower SAFELY
Bathe with DIGNITY

MULLEN® SHOWER SYSTEM

8Hours^{to} Accessible!
Saves and Saves 2-3 Days (1-8-00-846-5467)

Choose a Mullen shower base to easily and quickly fashion a level-entry shower. The pre-sloped, safety-textured top surface means you get a ready-to-use shower base on day one. Match a Mullen with wall panels and you can have a **finished shower in as little as 8 hours** (a truly great advantage in homes that have only one bathroom). The 60" x 32" and 60" x 38" models are designed to replace a standard tub with a curbless, '0' threshold shower.

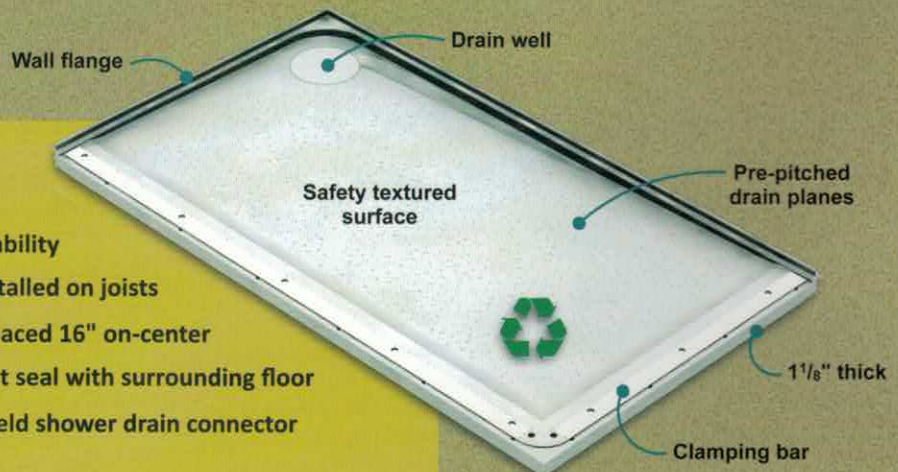

The innovative clamping system provides a watertight connection between a Mullen shower base and adjacent floor coverings of vinyl, tile, and stone. Ramps are also available.

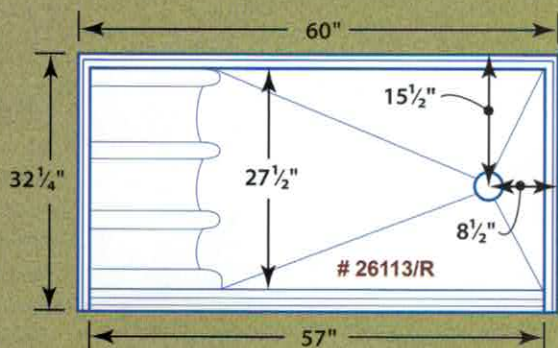

▲ Detail showing the safety textured surface and drain well of an alcove Mullen model.

Mullen Details

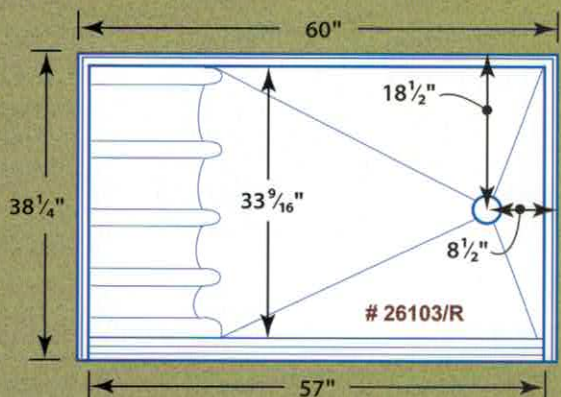

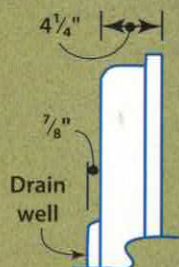

- platforms are 1¹/₈" thick at open edges
- alcove models offer cut-to-length adjustability
- support up to 560 lbs. when properly installed on joists
- structural — install directly onto joists spaced 16" on-center
- unique clamping bar ensures a watertight seal with surrounding floor
- drain well accommodates a 2" solvent weld shower drain connector
- made of recyclable materials

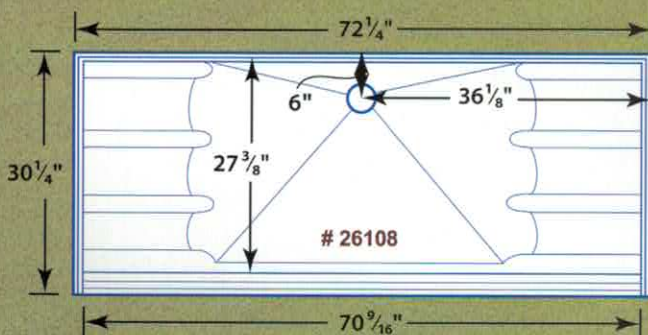

ALCOVE SHOWERS

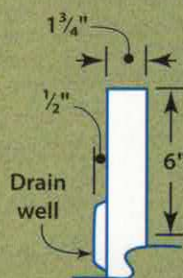

End View
(26113 & 26103)

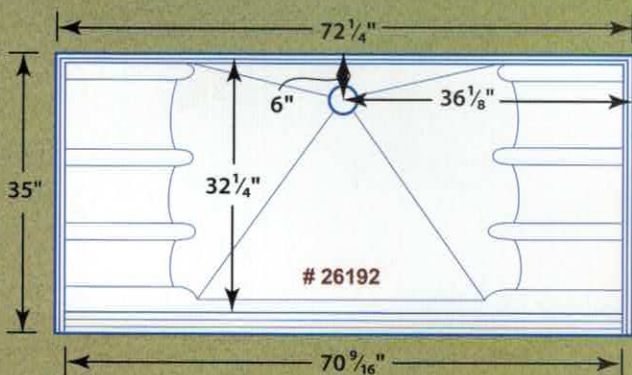

Models 26113 and 26103 can be shortened as much as 11". Be sure to order a cut-to-length kit to put a new end cap on the unit after it's cut.

End View
(26108 & 26192)

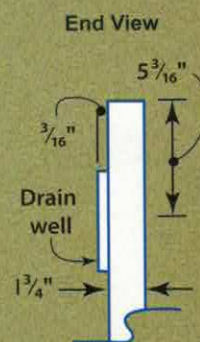

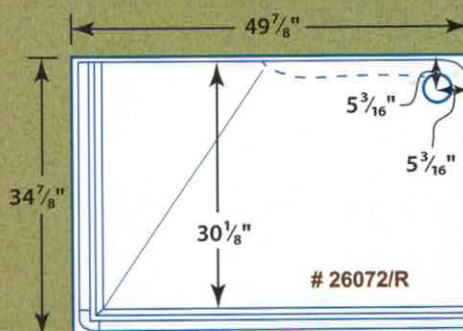

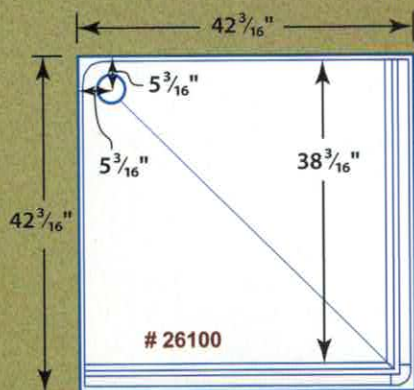

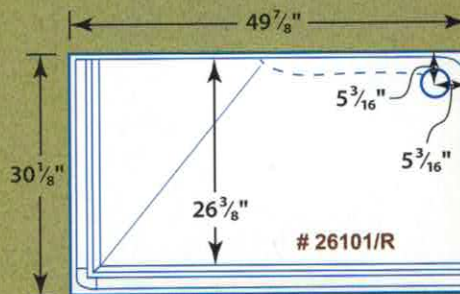

All four alcove shower models can be cut to length to fit custom installation requirements.

Cut up to 11" off either end or both ends of models 26108 and 26192. Every unit includes a cut-to-length kit for both ends.

CORNER SHOWERS

All corner showers have the same end profile.

BEFORE ▲

8 Hours to Accessible!

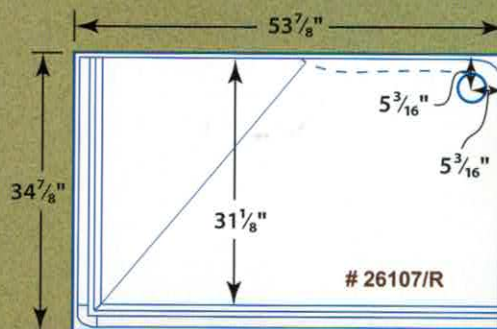

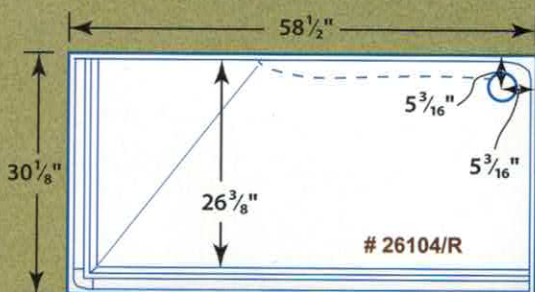

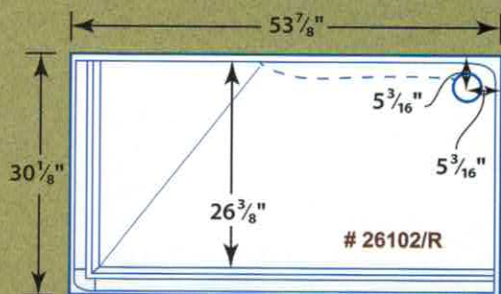

Safety and Peace of Mind. In a Single Day!

In one day a trained crew can replace your old tub with a modern, curbless, easy-entry shower.

8am Tub-to-shower specialists arrive.

11am The crew removes the old tub, shower controls and shower head. Cabinets, toilet, and other fixtures are set aside and protected if they are to be reinstalled. Tub area walls are stripped to the studs.

12pm After ensuring studs are plumb and structurally sound, blocking is added for a shower seat and plywood is fastened over the studs. Plywood provides unlimited options for adding grab bars wherever you need them.

For installation tips, watch our videos:
www.youtube.com/ARCFIRST

2pm Blocking is added between joists to support the perimeter and drain area of the Mullen shower base. The Mullen is set into position and carefully leveled, then secured with construction adhesive and fasteners driven into studs, joists, and blocking.

3pm New acrylic shower surround walls are installed, followed by grab bars and a shower seat.

4pm Vinyl is adhered to the floor and clamped into the Mullen for a watertight transition.

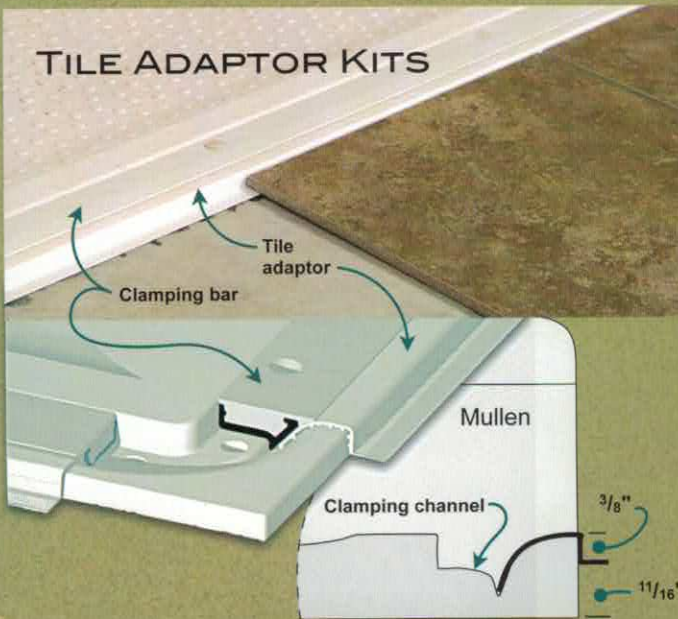

5pm The original vanity and sink are reinstalled as well as the faucet, shower controls, shower head, and toilet. Remodel complete!

MULLEN® SHOWER ACCESSORIES

TILE ADAPTOR KITS

CUT-TO-LENGTH KITS

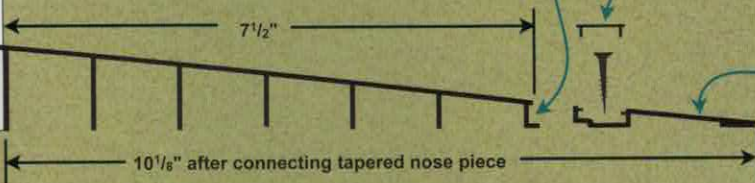

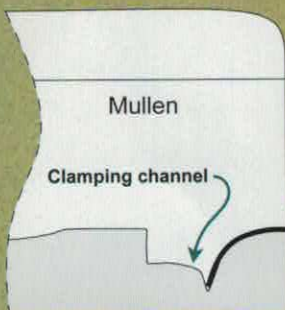

Order left cut-to-length kit for left hand alcove Mullen models, and right kit for right hand alcove Mullen models.

Cut-to-length kit

Ramp extends into clamping channel for a watertight seal.

RAMP KITS

Ramps mate with tile for a flush fit, or, by adding the tapered nose piece (included), allow use atop any floor. Ramps have a 1:8 slope gradient.

Tiling notch

Cover strip

Fit tapered nose piece to ramp and secure it to the floor, then snap the cover strip into place to hide the fasteners.

Choose a left hand
Mullen if you want the
drain at the left end.

Choose a right hand
Mullen if you want the
drain at the right end.
